Condition of National Banks. Washington, August 10 .- The Comptro ler of the Currency has prepared a report of the condition of the national banks, portion of which appeared in these dispatches some days ago. A few comparisons between the details of this statement and corresponding figures given in the last an nual report to Congress, November, 1880, will serve to show the immense increase in votume of business done by the banks and their general prosperous condition According to the report just out, on the last day of June the loans and dis-\$1,140,750,198, while the report, October 31, 1880, this item was \$1,041,000,000, an increase of \$99,759,198. The United States bonds held to secure circulation, June 30, 1881, amounted to \$358 287,500, while last October the gross amount was \$357,800,000. This increase, while not very large, is constdered remarkable in view of the profits on general business and speculation during the last few mouths, which offered great inducements to capital to withdraw from incident to the funding, and the general belief that a 3 per cent, bond might be issued in place of the 5's and 6's, under the Carlisle bill. Last October the banks held other bonds, in addition to those held as security disease, and if not Regulated in time great suffering, wretchedness, and Death will cusue.
